Q1.

	Marking Instructions	AO	Marks	Typical Solution
(a)	Shows that the set is closed under the operation $*$ (must show that under modulo 6, $a * b$ can only result in a member of the given set)	AO2.1	R1	As all answers to $a * b$ are reduced modulo 6 they are in the given set and thus the set is closed under $*$.
	Clearly identifies the identity element	AO1.1b	B1	Identity element = 2
	Finds and states the inverse of each element (PI) FT from 'their' identity	AO1.1b	B1	0 and 4 are inverses of each other 1 and 3 are inverses of each other 2 and 5 are self-inverse elements
	Shows associativity between elements of the set under the operation $*$	AO2.1	R1	$a * (b * c) = a + (b + c + 4) + 4$ is shown to equal $(a * b) * c = (a + b + 4) + c + 4$
	States correct conclusion that G is a group under the operation $*$ Only award if they have a completely correct solution, which is clear, easy to follow and contains no slips.	AO2.1	R1	As G satisfies each of the four group axioms under the binary operation $*$, G is a group
(b)	Identifies two correct subgroups. Condone inclusion of $\{0, 1, 2, 3, 4, 5\}$	AO1.1b	B1	$\{2\}$, $\{0, 2, 4\}$, $\{2, 5\}$
	Identifies all three proper subgroups and no others included	AO1.1b	B1	
(c)	Identifies the generator of G	AO3.1a	B1	$G = (\langle 1 \rangle, *)$ OR

OR generates every element of the group K (PI)			$K = (\{3,9,13,11,5,1\}, \times_{14})$ <table><tr><td>G</td><td>K</td></tr><tr><td>1</td><td>$\mapsto$ 3</td></tr><tr><td>0</td><td>$\mapsto$ 9</td></tr><tr><td>5</td><td>$\mapsto$ 13</td></tr><tr><td>4</td><td>$\mapsto$ 11</td></tr><tr><td>3</td><td>$\mapsto$ 5</td></tr><tr><td>2</td><td>$\mapsto$ 1</td></tr></table>	G	K	1	$\mapsto$ 3	0	$\mapsto$ 9	5	$\mapsto$ 13	4	$\mapsto$ 11	3	$\mapsto$ 5	2	$\mapsto$ 1
G	K																
1	$\mapsto$ 3																
0	$\mapsto$ 9																
5	$\mapsto$ 13																
4	$\mapsto$ 11																
3	$\mapsto$ 5																
2	$\mapsto$ 1																
Finds correctly a one-to-one mapping between each element of G and K (condone use of equal sign for this mark)	AO1.1b	B1															
Deduces that G is isomorphic to K with a concluding statement using the correct mathematical language, having used the correct notation throughout.	AO2.2a	E1	As there is a one-to-one mapping between the elements of G and the elements of K , $G \cong K$
