The National Minimum Wage after 15 years

Extract C: International comparison of adult minimum wages by country, December 2013

Country	Minimum wage in UK £s, using purchasing power parity exchange rates
Australia	7.79
France	7.77
Belgium	7.02
Netherlands	6.97
Ireland	6.80
New Zealand	6.35
UK	6.31
Canada	5.89
USA	5.31
Japan	4.80
Spain	3.48
Greece	3.40
Portugal	2.91

Source: Extracted from National Minimum Wage – Low Pay Commission 2014

Adult minimum wages relative to full-time median earnings, by country, 2012

Source: The Future Path of the National Minimum Wage - Low Pay Commission 2014

Some countries, such as China and India, do not have a single national minimum wage. In China, each province sets its own minimum wage to reflect local conditions. In November the hourly rate in Beijing was equivalent to approximately £1.74, whereas in Hunan it was around £0.93.

International comparisons of productivity, final estimates for 2012

Current price GDP per hour worked

UK = 100

Canada	105
France	132
Germany	131
Italy	111
Japan	89
UK	100
USA	135
G7 average	120

The National Minimum Wage after 15 years**Extract B: The National Minimum Wage to rise to £6.50 in October 2014**

Will a rise in the National Minimum Wage (NMW) damage the competitiveness of the UK economy? Representatives of businesses in the UK have claimed that the recently announced 3% increase in the National Minimum Wage is 'unwelcome in today's economic climate'. Critics of the increase maintain that 'it is essential that businesses remain competitive and that the above inflation increase in the NMW will add significantly to business costs'. Yet competitiveness is not just about wages, it also, for example, depends on productivity, the exchange rate and innovation.

THE EUROPEAN UNION CONTEXT

Extract D: Policies for fairness

The European Union is one of the richest areas in the world but both absolute poverty and relative poverty exist within the EU. Although unemployment is a major cause of poverty, the working poor, whose wages are at or below the 'poverty line', are estimated to number 20 million across the EU. 1

The EU named 2010 as the 'European Year for Combating Poverty and Social Exclusion', but this hardly featured at all in the UK media. However, the concept of fairness is very much on the national agenda. For example, the UK Prime Minister, David Cameron, did at one stage suggest that the earnings of the highest paid public servant should be no more than 20 times that of the lowest. Furthermore, many commentators have suggested that, if such a formula were introduced, the idea could spread to the private sector. 5

The UK is one of 20 out of 27 EU member states with a minimum wage. Across those 20 countries, minimum wages are between 30% and 50% of average earnings. The European Parliament has floated the idea of an all-EU 'minimum income' but this is not expected to be taken up by governments just yet. And how long before there are also serious proposals for a national, or even an all-EU, maximum wage? 10

Between 1980 and 2005, the distribution of income in the UK became less equal. In 1980, the top 1% of earners received 12% of all income. However, by 2005 the top 1% of earners received 16% of all income, with bonuses in the financial sector pushing this figure nearer to 18%. The trend towards greater income inequality in the UK in recent years has largely been justified by the idea that market forces provide 'incentives' for successful businesses and that the spending power of high earners 'trickles down' to the rest of society. 15

Fairness is difficult to define. One view, suggested by the UK's *Institute for Public Policy Research*, is that fairness involves basic minimum entitlements and equal opportunities, plus an absence of obstacles created by factors such as where an individual is born or where they happen to live. Addressing unfairness in the UK tends to focus on policies to redistribute income after it has been earned: for example, through the tax and benefits system. On the other hand, much EU policy is aimed at reducing the unequal distribution of income at source, through what are called cohesion policies to target supply-side obstacles. 20

EU policies are, to a large extent, aimed at boosting the employability and earning potential of workers through measures such as skills training and business advice. They work on the 'supply side' of the labour market but the demand for labour cannot be ignored. For example, despite receiving significant levels of EU funding, recently Wales lost 900 well-paid, skilled jobs when the German company *Robert Bosch* moved its factory to Hungary, where wages are much lower. Perhaps an all-EU minimum wage would have helped to prevent this. 25

- 11.** Assess the economic costs **and** benefits of government action which results in the UK becoming a less equal society. [25 marks]

- 12.** ‘...children from poor families are likely to grow into poor adults, and remain poor into old age’ (The Global Context Extract B, lines 7–8).

Using the data and your economic knowledge, evaluate whether it is better for the UK government to reduce poverty by using policies to improve people’s ability to earn higher wages during their working lives, rather than through the provision of state benefits to those who are poor for various reasons.

[25 marks]

13. THE GLOBAL CONTEXT

Extract C: A lot of bottle

The global market for bottled water is dominated by a small number of large firms, and demonstrates another of the curiosities of globalisation. A plastic bottle of water contains two of the world’s most precious commodities: oil and water. Many millions of people, living in absolute poverty, are in need of clean water, and yet the water bottling industry in the more developed countries transports water from people who have water to other people who already have water. Critics say that, in terms of productive resources, it takes three litres of water and one-fifth of a litre of oil to manufacture one litre of bottled water and transport it to a shop shelf. 1

In the UK, drinking water is cheap, and if unmetered it is even ‘free’ in terms of marginal cost to the user. Safe drinking water is available on tap through water mains almost anywhere. Thames Water estimates that a litre of mains water creates 600 times less carbon dioxide than a litre of bottled water. Yet the British public spends over £2 billion each year on bottled water, relying mainly on local councils to dispose of the resulting 3 billion plastic bottles. 5

15.

THE GLOBAL CONTEXT

Extract B: Poverty and age

The UN estimates that half the children in the world live in poverty. The 40 poorest countries in the world contain 500 million people who share a total annual income which is less than the total personal wealth of the 40 richest people in the world. 1

When measuring poverty within countries, economists generally use an indicator of relative poverty. In the UK, government statisticians generally view people as being 'at risk of poverty' if their household disposable income after housing costs is less than 60% of the average. Politicians in the UK often focus on child poverty, because children from poor families are likely to grow into poor adults, and remain poor into old age. In 1999, the then Prime Minister, Tony Blair, promised to eliminate child poverty by 2020. In 2012, the Office for National Statistics (ONS) reported that relative poverty, as measured by the gap between a family's income and the national average, had fallen since 2008. However, this was likely to be because people in the middle had become worse off, rather than the poorest becoming better off. People aged 18 to 24 saw their risk of poverty rise, due to rising unemployment among that age group. However, it is not necessary to be unemployed to be poor. It has been said that some UK government benefits, such as tax credits, subsidise low wages paid by employers to many workers whose jobs are essential but may require few specialist skills. Training schemes and minimum wage legislation are among government policies aimed at reducing the number of 'working poor' in the labour market. 5 10 15

18.

THE GLOBAL CONTEXT

Extract C: Pensions and poverty

A major factor in tackling global poverty is the provision of adequate pensions. According to the think tank, Pensionwatch, four out of five older people around the world have no access to a pension, with many millions living in poverty or working well into their old age. Around 80 countries have some form of state pension which gives a basic income in old age. 1

An important question is whether individuals should take responsibility for their old age by choosing to contribute to a scheme provided by the state, or an employer, or via the insurance industry. Only a few wealthier countries also have a basic 'universal' state pension, financed from general taxation rather than contributions. These have a cost to the taxpayer but they reduce the social costs of old age poverty. 5

Statisticians can make long-term predictions of population changes and yet many private and public sector pension schemes are in crisis as countries are faced with ageing populations and rising levels of national debt. This can be seen as government failure, caused by poor forward planning. There has also been some market failure. For instance, due to the selling of inappropriate insurance-based private pension schemes, and a significant fall in the value of pensions being provided by even the better schemes, many consumers have lost trust in the private sector pensions industry. 10 15

It could be that many people are simply too poor to be able to afford to save, or it might be that people often prefer current consumption over future consumption. This form of market failure could be tackled by the government imposing a high rate of compulsory pension saving, as in Chile and Singapore. There was a small step in this direction in the UK in 2012 when the government launched 'auto-enrolment', an occupational pension scheme pioneered in Australia and New Zealand where employees are automatically included unless they opt out. While rich countries argue over who should pay for pensions, and by what methods, in poor countries, where pensions are needed the most, they are likely not to exist at all. 20

The National Minimum Wage after 15 years

Extract D: Calls for employers to commit to paying the Living Wage as the pay gap widens

The TUC, the Archbishop of Canterbury and Boris Johnson, the Mayor of London, are just a few of those who have called on employers to pay their workers a living wage. The Living Wage is defined as 'the wage that can meet the basic needs to maintain a safe, decent standard of living within the community'. The Living Wage differs from the minimum wage in that the latter is set by law and may fail to provide people with enough income to have a reasonable quality of life. It has been claimed that five million people are paid less than the Living Wage, which is estimated at £8.80 an hour in London and £7.65 elsewhere. 1 5

Proponents argue that paying the Living Wage means workers can live with dignity and not just exist. By paying the Living Wage, employers can lift their employees out of poverty, debt, and illness, which will improve family life. Employers benefit because it is easier to recruit and retain staff, productivity increases, and there is a reduction in sickness and absenteeism. Government spending on welfare is also reduced. Everyone is a winner. 10

The National Minimum Wage after 15 years**Extract E: The National Minimum Wage: silver bullet or poisoned chalice?**

Since its introduction in 1999, the NMW has increased by 75%, whilst average earnings have risen by 61% and the Retail Price Index by 53%. A new report, published by the Institute of Economic Affairs, argues that the NMW should be abolished for apprentices and under 18-year-olds in the UK to tackle persistently high youth unemployment. The rate for 16 and 17 year olds is due to rise to £3.79 per hour in October 2014 and to £2.73 per hour for apprentices. The authors of the report also believe that setting a single NMW is likely to have adverse effects on private sector employment in the regions. In Wales, for example, the NMW is 70% of median hourly earnings in the private sector, compared to just 42% in London. The report recommends that the minimum wage should be regionalised. When determining the minimum wage for each region, differences in productivity and economic conditions should be taken into consideration.
