

Mark schemes

1.

Areas for discussion include:

- trends in social care since privatisation in the 1990s and how privatisation may have led to lower pay, certainly compared to remaining state care providers
- rising pressures on the sector as a result of an ageing population with increasing care demands
- social care as a merit good and market failure arising from the external benefits of social care
- lack of funding from central government, restricting local government ability to pay for care
- low pay in the care sector, job insecurity and the fact that many are leaving the care sector for jobs in retail and supermarkets for better pay and conditions
- the lack of labour supply is threatening the sector, with high levels of job vacancies (38% of care homes understaffed, 6.6% of roles vacant)
- reports of inadequate care in some care homes and the link between low pay, low motivation and inadequate care
- bankruptcy of care home providers
- ineffective regulation by the Care Quality Commission/risk of regulatory capture
- market failure arising from the low incomes of many of those requiring care
- discussion of the lack of integration between the care sector and the NHS
- discussion of a range of policies to include
 - more generous government funding for local authorities
 - subsidies for private providers
 - nationalisation
 - hypothecated tax for care funding/additional taxation
 - a more generous National Living Wage to encourage labour supply
 - a less generous National Living Wage to ease the pressure on care home companies
 - more investment in training, career development, status, etc
 - promoting union membership
 - professionalisation of workforce to raise standards
 - relaxing immigration policy for care workers to ease recruitment problems
 - providing people in need of care with increased cash welfare benefits to help them purchase their own care
 - introduce a compulsory insurance system providing people with the ability to purchase their own care
- discussion of how the market is likely to develop in the absence of government intervention and whether the low pay of care workers is likely to be rectified by the market itself
- discussion of how care might improve if the private sector were to be given a greater role in the care market
- market failure arguments
- government failure arguments.

Level of response	Response	Max 25 marks
5	Sound, focused analysis and well-supported evaluation that: - is well organised, showing sound knowledge and understanding of economic terminology, concepts and principles with few, if any, errors - includes good application of relevant economic principles to the given context and, where appropriate, good use of data to support the response - includes well-focused analysis with clear, logical chains of reasoning - includes supported evaluation throughout the response and in a final conclusion.	21 – 25 marks
4	Sound, focused analysis and some supported evaluation that: - is well organised, showing sound knowledge and understanding of economic terminology, concepts and principles with few, if any, errors - includes some good application of relevant economic principles to the given context and, where appropriate, some good use of data to support the response - includes some well-focused analysis with clear, logical chains of reasoning - includes some reasonable, supported evaluation.	16 – 20 marks
3	Some reasonable analysis but generally unsupported evaluation that: - focuses on issues that are relevant to the question, showing satisfactory knowledge and understanding of economic terminology, concepts and principles but some weaknesses may be present - includes reasonable application of relevant economic principles to the given context and, where appropriate, some use of data to support the response - includes some reasonable analysis but which might not be adequately developed or becomes confused in places - includes fairly superficial evaluation; there is likely to be some attempt to make relevant judgments but these are not well-supported by arguments and/or data.	11 – 15 marks
2	A fairly weak response with some understanding that: - includes some limited knowledge and understanding of economic terminology, concepts and principles but some errors are likely - includes some limited application of relevant economic principles to the given context and/or data to the question - includes some limited analysis but it may lack focus and/or become confused - includes attempted evaluation which is weak and unsupported.	6 – 10 marks
1	A very weak response that: - includes little relevant knowledge and understanding of economic terminology, concepts and principles - includes application to the given context which, at best, is very weak - includes attempted analysis which is weak and unsupported.	1 – 5 marks

[25]

2.

D

[1]

3.

A

[1]

5.

B

[1]

6.

For relevant definitions e.g. imperfect information (2 marks) , merit goods (2 marks) , demerit goods (2 marks) , market failure (2 marks) .	Up to 2 marks per point defined or explained to a maximum of 4 marks
For explanation – Award 1 mark for each step in a logical chain of reasoning up to 15 marks .	
Examples include - Poor information (1 mark) or asymmetric information (1 mark) are among a number of possible reasons for market failure (1 mark). When merit goods are consumed benefits do not stop with the prime consumer (1 mark), but spill over into the neighbourhood (1 mark) as positive externalities (1 mark). The consumer will not necessarily be aware of these benefits (1 mark) and so will not base spending decisions on this information (1 mark). Since individual consumers under-estimate the social benefits of their consumption, (1 mark) merit goods tend to be under-consumed (1 mark). It follows that they are also under-supplied (1 mark). Demerit goods are those where costs do not stay with the consumer (1 mark), but spill over into the neighbourhood (1 mark) as negative externalities (1 mark) - Imperfect information might affect consumers in the LONG RUN, causing them to demand too much or too little, compared with what they might have consumed if they were fully aware of the future consequences to themselves. - Market signals tell us about what is happening now, they are not adept at foreseeing the future; current market signals might, for instance, tell us to close down an industry, a decision that might be regretted some time later when conditions change (e.g. the policy of closing branch railway lines in favour of roadbuilding in the 1960s)	
Use of diagrams to help support explanations, e.g. short run and long run cost curves.	Up to 2 marks per diagram (1 mark for labelling, 1 mark for information shown) to a total of 4 marks.
Relevant real world examples and/or relevant reference to the UK and/or other economies.	1 mark per reference to a maximum of 2 marks

[15]

7.

Areas for discussion include:

- roads as a scarce resource
- the negative externalities associated with congestion, eg the longer journey times for other road users
- what is meant by road-pricing and how it might be implemented (allow both tolls and congestion charges as forms of road-pricing or as alternative policies)
- other policies that might be employed such as: higher taxes on fuels, increasing the road fund licence, building more roads, subsidising public transport, investing in and improving public transport
- the extent to which roads display the characteristics of a public good and how has this been affected by developments in technology.
- congestion is most prevalent on certain roads and at certain times of the day
- how road-pricing might be implemented, eg charging drivers a price for each mile travelled with different prices for different roads and for different times of the day, perhaps mentioning automatic number plate recognition systems
- setting up tolls on major roads with the toll charge varying between peak and off-peak times
- how higher taxes on fuels would help to reduce congestion and the relevance of price elasticity of demand
- how subsidising, for example, bus and rail transport, will help to reduce congestion and the relevance of cross elasticity of demand
- the budgetary and cost implications of the different options
- possible unintended consequences of the different methods, eg the impact of road pricing on city centres, such as empty shops, higher prices for products as transport costs rise
- equity arguments, eg are indirect taxes regressive, should the road user pay or the taxpayer, the impact of the different policies on the poorest members of society, town versus country dwellers, commuters and businesses
- the likelihood of government failure, eg inadequate information means that the government may set an inappropriate price for using roads, eg a price that doesn't reflect the true cost of congestion, government policy is likely to be affected by public opinion and the reactions of voters.

The use of relevant diagrams to support the analysis should be taken into account when assessing the quality of the candidate's response to the question.

[25]

8.

Relevant issues include:

- sources of market failure in transport, eg externalities, roads as a quasi-public good
- examples of externalities associated with journeys by road and rail, eg congestion and longer journey times for other road users, pollution and associated health problems, environmental damage
- explaining why roads may exhibit some of the characteristics of a public good, ie they are, up to a point, non-rival and may be non-excludable.
- why, in the absence of government intervention, the existence of negative externalities means that the user will not bear the full cost of the activity
- free market equilibrium level of output ($MPB=MPC$) and the social optimum level of output ($MSB=MSC$)
- negative externalities associated with rail journeys are likely to be less than for journeys by road, hence road journeys will be under-priced by more than rail journeys, ie there will be a greater divergence between the marginal social cost and the marginal private cost for road journeys than rail journeys
- rail companies charge for the use of the rail network but, in most cases, road users are not directly charged for the use of roads
- taxes imposed on the motorist mean that some, or all, of the costs of building and maintaining the road network are borne by the motorist.

The use of relevant diagrams to support the analysis should be taken into account when assessing the quality of the candidate's response to the question.

[15]

9.

Areas for discussion include:

- distinction between traditional economic theory, which assumes people are rational decision makers, and behavioural economic theory
- market failure and people's choice of diet, eg asymmetric information, 'unhealthy food products' as demerit goods, inequitable distribution of income
- advertising and product promotion strategies employed by the food industry and how they influence people's choices
- policies that might help to correct information problems, eg compulsory food labelling, publicity campaigns
- policies to restrict advertising that misinforms or misleads consumers
- the impact of imposing legally enforced restrictions on, for example, the fat or salt content of processed foods
- policies that can be adopted to encourage people to adopt a healthy diet, eg indirect taxes, subsidies, better information
- relevance of elasticities
- behavioural factors that might affect people's choices, eg habit, other people's choices, social norms, motivation to 'do the right thing', people give inadequate weight to the long-term consequences of their actions
- policies related to behavioural economic theory that can be used to encourage people to adopt a healthy diet, eg nudges, framing, influencing attitudes
- whether providing better information and leaving it to individuals to make their own choices would lead to an improvement in people's well-being
- whether people are 'predictably irrational' and whether government policies that do not take this into account are likely to be ineffective
- whether the individual is the best judge of their own welfare; and whether behavioural solutions are paternalistic
- the unintended consequences of various policies.

The use of relevant diagrams to support the analysis should be taken into account when assessing the quality of the candidate's response to the question.

[25]

10.

In this part of the question, candidates will need to demonstrate that they are able to evaluate issues and arguments to support a conclusion if they are to be awarded **more than 15 marks**.

Level 5	Good analysis <u>and</u> good evaluation	22 to 25 marks <i>Mid-Point 24 marks</i>
Level 4	Good analysis <u>but</u> limited evaluation OR Reasonable analysis <u>and</u> reasonable evaluation	17 to 21 <i>Mid-Point 19 marks</i>
Level 3	Reasonable including some correct analysis <u>but</u> very limited evaluation	10 to 16 <i>Mid-Point 13 marks</i>
Level 2	Weak with some understanding	4 to 9 <i>Mid-Point 7 marks</i>
Level 1	Very weak	0 to 3 <i>Mid-Point 2 marks</i>

**Issues and areas for discussion include**

Introduction	- Definitions, examples - Economic welfare - Merit goods, distinguished from public goods - Asymmetric information - Missing markets
Developing the response to the question: Application/Analysis	- Reasons for government provision, e.g. - Positive externalities - Negative externalities - Unequal income distribution - Relative and absolute poverty; unequal life chances - Merit goods - Social objectives : health, education - Economic objectives; infrastructure, efficiency - Equity arguments ('social wages' from public services) - Imperfect information - Missing markets - Public goods - Social or strategic importance (e.g. defence, law & order) - Non-rivalry - Non-diminishable - Non-excludable / pure / non-pure - Arguments for involving markets, e.g. - Efficiency - Competition - Trickle down arguments - Incentive arguments
Evaluation	- Critical discussion of the quotation - Different approaches to - Merit goods and public goods - Different types of merit good - Merit and demerit goods - Is this a really case of either / or? - Can the private sector function efficiently without a public sector (and vice versa) - Can the private sector be trusted to function properly without intervention? - Possibility of public / private partnerships - Money costs and opportunity costs - Real world examples such as public and private transport, primary, secondary, tertiary education; tuition fees versus graduate taxes; public universities, private universities - Overall view of advantages and disadvantages of private and state provision <i>Examiners should note that, for some of the weaker or average candidates, parts of the above represent quite sophisticated evaluation and so it is important to ensure that more basic evaluation is adequately rewarded where a genuine effort has been made to display that skill.</i>

Also give credit for

- Diagrams
- An overall judgement on the issues raised
- Examples

It will only be possible for students to consider a few of the above. They may also discuss issues not discussed above.

[25]

11.

C

[1]

12.

For relevant definitions , e.g. commercial success, in terms of trade and profitability (2 marks), market failure, in terms of opportunity costs / externalities (2 marks)	Up to 2 marks per point defined or explained to a maximum of 4 marks
For explanation – award 1 mark for each link in a logical chain of reasoning to a maximum of 15 marks.	
Possible explanations include • A major international airport, such as Heathrow has multiplier effects on the local economy (1 mark). It is also important to the national economy as a transport hub (1 mark). The airport itself is these days likely to be a private sector enterprise (1 mark) and many other private sector organisations (shops, cafes, suppliers, contractors) will benefit from the economic activity (1 mark). If profitable, the whole enterprise will be a significant commercial success (1 mark). However, the government will be expected to provide infrastructure (1 mark) with an opportunity cost (1 mark). The taxpayer might not get an adequate return (1 mark). There are also environmental costs (1 mark) such as noise, air pollution and road congestion (1 mark for an example). Commercial success is measured by profits, whereas externalities and other market failures are difficult to measure (1 mark) therefore they can co-exist (1 mark). • An airport, such as Heathrow, as a major employer	
Use of diagrams to support explanations , e.g. Internal / external costs and benefits	Up to 2 marks per diagram (1 mark for labelling, 1 mark for information shown) to a total of 4 marks.
Relevant real world examples and/or relevant reference to the UK and/or other economies.	1 mark per reference to a maximum of 2 marks

[15]

**13.****Areas for discussion include:**

- the existence of market failure
- explanation of how taxes reduce consumption
- distinction between specific and ad valorem tax
- the argument that if demand is inelastic, this will result in larger tax revenues which can be put towards public health spending to the same effect
- the extent to which the burden of the sugar tax will be passed on to consumers rather than hitting profits of producers
- the likely extent to which producers change their recipes to avoid the tax
- the fact that the tax only applies to some sugary drinks, and not others (eg milk-based or fruit-based drinks), and does not apply to sugary foods such as chocolate bars
- unintended consequences (positive and negative) which have emerged (or could emerge) from the policy
- alternative policies such as a minimum price per litre, a rationing of quantity, a ban in school vending machines, quantitative limits on the sugar added to drinks in the production process, subsidy for healthier alternatives
- policies to increase uptake of healthier alternatives such as water or milk including information campaigns, subsidies, free school milk, etc.
- whether more prominent labelling (perhaps using a “teaspoon of sugar” measure) is more or less effective
- whether consumer drinks choice is an appropriate area of interference by the Government, or alternatively evidence of the “nanny state”
- whether insights from behavioural economics offer possible solutions, e.g. nudge economics, social norms
- government failure arguments

The use of relevant diagrams to support the analysis should be taken into account when assessing the quality of the candidate's response to the question.

Level of response	Response	Max 25 marks
5	Sound, focused analysis and well-supported evaluation that: - is well organised, showing sound knowledge and understanding of economic terminology, concepts and principles with few, if any, errors - includes good application of relevant economic principles to the given context and, where appropriate, good use of data to support the response - includes well-focused analysis with clear, logical chains of reasoning - includes supported evaluation throughout the response and in a final conclusion.	21 – 25 marks
4	Sound, focused analysis and some supported evaluation that: - is well organised, showing sound knowledge and understanding of economic terminology, concepts and principles with few, if any, errors - includes some good application of relevant economic principles to the given context and, where appropriate, some good use of data to support the response - includes some well-focused analysis with clear, logical chains of reasoning - includes some reasonable, supported evaluation.	16 – 20 marks
3	Some reasonable analysis but generally unsupported evaluation that: - focuses on issues that are relevant to the question, showing satisfactory knowledge and understanding of economic terminology, concepts and principles but some weaknesses may be present - includes reasonable application of relevant economic principles to the given context and, where appropriate, some use of data to support the response - includes some reasonable analysis but which might not be adequately developed or becomes confused in places - includes fairly superficial evaluation; there is likely to be some attempt to make relevant judgements but these are not well-supported by arguments and/or data.	11 – 15 marks
2	A fairly weak response with some understanding that: - includes some limited knowledge and understanding of economic terminology, concepts and principles but some errors are likely - includes some limited application of relevant economic principles to the given context and/or data to the question - includes some limited analysis but it may lack focus and/or become confused - includes some evaluation which is weak and unsupported.	6 – 10 marks
1	A very weak response that: - includes little relevant knowledge and understanding of economic terminology, concepts and principles - includes application to the given context which, at best, is very weak - includes attempted analysis which is weak and unsupported.	1 – 5 marks

**14.****Areas for discussion include:**

- analysis of the main sources of air pollution (road vehicles, ships, factories, energy production)
- analysis of the main impacts of air pollution (localised health problems, smog, acid rain, global warming)
- the impact that existing policies have had, eg air passenger duty, fuel excise duty, regulations surrounding emissions (NB Volkswagen scandal), price controls
- explanation of regulation
- the benefits of regulation (simple, easy to change, easier to enforce)
- the costs of regulation (blunt and inefficient tools, create rent-seeking behaviour, unresponsive to changing markets)
- explanation of property rights and how a clear allocation of property rights might help,
- the limitations of property right allocation as an effective policy
 - how the initial allocation of property rights can be extremely problematic
 - how difficult it can be to identify when a right is being breached. For example, if an individual has a right to clean air, how is “clean air” to be defined?
- the success or otherwise of tradable permit systems such as the EU Emission Trading Scheme and the Californian trading system
- explanation of environmental taxation and how it might be applied in this context
- the benefits and costs of taxation
- the international nature of the problem, meaning that interventions taken by individual countries can address localised problems such as smog, but that problems such as global warming require coordinated global action
- examples of successful/unsuccessful regulatory interventions
- whether improved information can be an effective antidote to polluting behaviour
- government failure arguments.

The use of relevant diagrams to support the analysis should be taken into account when assessing the quality of the candidate's response to the question.

Level of response	Response	Max 25 marks
5	Sound, focused analysis and well-supported evaluation that: - is well organised, showing sound knowledge and understanding of economic terminology, concepts and principles with few, if any, errors - includes good application of relevant economic principles to the given context and, where appropriate, good use of data to support the response - includes well-focused analysis with clear, logical chains of reasoning - includes supported evaluation throughout the response and in a final conclusion.	21 – 25 marks
4	Sound, focused analysis and some supported evaluation that: - is well organised, showing sound knowledge and understanding of economic terminology, concepts and principles with few, if any, errors - includes some good application of relevant economic principles to the given context and, where appropriate, some good use of data to support the response - includes some well-focused analysis with clear, logical chains of reasoning - includes some reasonable, supported evaluation.	16 – 20 marks
3	Some reasonable analysis but generally unsupported evaluation that: - focuses on issues that are relevant to the question, showing satisfactory knowledge and understanding of economic terminology, concepts and principles but some weaknesses may be present - includes reasonable application of relevant economic principles to the given context and, where appropriate, some use of data to support the response - includes some reasonable analysis but which might not be adequately developed or becomes confused in places - includes fairly superficial evaluation; there is likely to be some attempt to make relevant judgements but these are not well-supported by arguments and/or data.	11 – 15 marks
2	A fairly weak response with some understanding that: - includes some limited knowledge and understanding of economic terminology, concepts and principles but some errors are likely - includes some limited application of relevant economic principles to the given context and/or data to the question - includes some limited analysis but it may lack focus and/or become confused - includes some evaluation which is weak and unsupported.	6 – 10 marks
1	A very weak response that: - includes little relevant knowledge and understanding of economic terminology, concepts and principles - includes application to the given context which, at best, is very weak - includes attempted analysis which is weak and unsupported.	1 – 5 marks

[25]

15.

Areas for discussion include:

- explanation of market failure
- sugary drinks as demerit goods leading to over-consumption
- asymmetric/imperfect information problems as consumers may fail to recognise the true costs and benefits of what they consume
- negative externalities in consumption
- examples of negative externalities in consumption arising from sugary drinks
- explanation of the specific health concerns and their burden on the NHS
- concerns about dental hygiene amongst children
- addictive properties of sugary drinks leading to inelastic demand
- reference to 'behavioural' reasons why sugary drinks might be over-consumed, e.g. bounded rationality, bounded self-control, social norms and other cognitive biases
- the tendency to undervalue the long-run consequences of consuming sugary drinks (the overoptimism bias).

The use of relevant diagrams to support the analysis should be taken into account when assessing the quality of the candidate's response to the question.

Level of response	Response	Max 15 marks
3	A good response provides an answer that: • is well organised and develops a selection of the key issues that are relevant to the question • shows sound knowledge and understanding of economic terminology, concepts and principles with few, if any, errors • includes good application of relevant economic principles to the given context and, where appropriate, good use of data to support the response • includes well-focused analysis with clear, logical chains of reasoning.	11 – 15 marks
2	A reasonable response provides an answer that: • focuses on issues that are relevant to the question • shows satisfactory knowledge and understanding of economic terminology, concepts and principles but some weaknesses may be present • includes reasonable application of relevant economic principles to the given context and, where appropriate, some use of data to support the response • includes some reasonable analysis but which might not be adequately developed or becomes confused in places.	6 – 10 marks
1	A weak response provides an answer that: • has identified one or more relevant issues • has some limited knowledge and understanding of economic terminology, concepts and principles but some errors are likely • has very limited application of relevant economic principles to the given context and/or data to the question • might have some limited analysis but it may lack focus and/or become confused.	1 – 5 marks

[15]

16.

B

[1]

17.

Level of response	Response	Max 25 marks
5	Sound, focused analysis and well-supported evaluation that: - is well organised, showing sound knowledge and understanding of economic terminology, concepts and principles with few, if any, errors - includes good application of relevant economic principles and, where appropriate, good use of data to support the response - includes well-focused analysis with clear, logical chains of reasoning - includes supported evaluation throughout the response and in a final conclusion.	21 – 25 marks
4	Sound, focused analysis and some supported evaluation that: - is well organised, showing sound knowledge and understanding of economic terminology, concepts and principles with few, if any, errors - includes good application of relevant economic principles and, where appropriate, some good use of data to support the response - includes some well-focused analysis with clear, logical chains of reasoning - includes some reasonable, supported evaluation.	16 – 20 marks
3	Some reasonable analysis but generally unsupported evaluation that: - focuses on issues that are relevant to the question, showing satisfactory knowledge and understanding of economic terminology, concepts and principles but some weaknesses may be present - includes reasonable application of relevant economic principles and, where appropriate, some use of data to support the response - includes some reasonable analysis but which might not be adequately developed or becomes confused in places - includes fairly superficial evaluation; there is likely to be some attempt to make relevant judgements but these aren't well-supported by arguments and/or data.	11 – 15 marks
2	A fairly weak response with some understanding that: - includes some limited knowledge and understanding of economic terminology, concepts and principles but some errors are likely - includes some limited application of relevant economic principles and/or data to the question - includes some limited analysis but it may lack focus and/or become confused - includes some evaluation which is weak and unsupported.	6 – 10 marks
1	A very weak response that: - includes little relevant knowledge and understanding of economic terminology, concepts and principles - includes analysis which is, at best, very weak - includes attempted evaluation which is weak and unsupported.	1 – 5 marks

Relevant issues and areas for discussion include:

- adequate housing as a basic human need, indicated by the mention of housing as a merit good in **Extract E**
- population growth, leading to more households, outstripping the growth in the UK's housing stock
- different methods of dealing with the problems experienced in the housing market, some of which involve more government spending on housing, eg relaxing planning controls, eliminating other impediments to private sector provision of more houses, making it easier for people to borrow, cutting SDLT, making it more expensive for people to buy and own a second home, discouraging housebuilders from sitting on building land, 'encouraging' local authorities to build more houses, subsidising housing associations, increasing 'housing benefits' paid to people on low incomes, rent controls, measures to encourage the provision of low-cost housing, encouraging innovation and improvements in productivity in the construction of houses
- an assessment of the pros and cons of some of the above
- the impact of more government spending on housing on the budget deficit and the national debt
- the significance of the type of government spending and whether it affects the 'current budget balance' or the overall budget balance, ie ceteris paribus, more capital spending will increase the overall budget deficit but not the current deficit
- the macroeconomic consequences of an increase in the budget deficit and national debt
- possible opportunity cost of an increase in government spending on housing, eg reduced spending on other programmes, higher taxes, crowding out of the private sector
- the case for more government borrowing for capital projects when government borrowing costs are low
- are there sufficient resources, eg construction workers, available to increase the number of houses built?
- increased spending on house building and short-run economic growth, including possible multiplier effects
- increased spending on house building and long-run economic growth
- market failure in the housing market and the possibility that state intervention may result in government failure
- the case for more state provision and ownership of the housing stock versus encouraging more private-sector provision
- should private-sector provision be encouraged by deregulation and relaxing planning controls or by the state giving financial support to the sector and/or homebuyers?
- are measures that make housing more affordable likely to help by encouraging private sector providers to build more homes or are they likely to just bid up house prices, adding to the problem?

Good answers are likely to present and evaluate arguments for and against the government increasing its spending on housing. They are also likely to discuss other methods of dealing with the problems of the UK housing market. The significance of and the impact on the macroeconomy of increasing spending on housing are likely to be considered, as well as possible microeconomic effects of specific policies identified. The response should include a supported recommendation which could be either for or against the government increasing its spending on housing. The recommendation might also include an alternative policy or set of policies.

The use of relevant diagrams to support analysis should be taken into account when assessing the quality of a student's response to the question.

An answer that does not include ANY evaluation must not be awarded more than 13 marks.

[25]

18.

Areas for discussion include:

- definition of market failure
- distinction between MSB and MPB (allow MSC and MPC)
- explanation of why MPB is greater than MSB
- analysis of the negative consumption (allow production) externalities produced by driving petrol and diesel cars
 - air pollution
 - noise pollution
 - congestion
 - accidents
- why the existence of negative externalities leads to over-production and consumption
- discussion of current government interventions such as licences, speed limits, age restrictions, congestion charge
- information asymmetry problems, for example the fact that diesel cars used to be thought of as cleaner than petrol cars.

The use of relevant diagrams to support the analysis should be taken into account when assessing the quality of the candidate's response to the question.

Level of response	Response	Max 15 marks
3	A good response provides an answer that: • is well organised and develops a selection of the key issues that are relevant to the question • shows sound knowledge and understanding of economic terminology, concepts and principles with few, if any, errors • includes good application of relevant economic principles to the given context and, where appropriate, good use of data to support the response • includes well-focused analysis with clear, logical chains of reasoning.	11 – 15 marks
2	A reasonable response provides an answer that: • focuses on issues that are relevant to the question • shows satisfactory knowledge and understanding of economic terminology, concepts and principles but some weaknesses may be present • includes reasonable application of relevant economic principles to the given context and, where appropriate, some use of data to support the response • includes some reasonable analysis but which might not be adequately developed or becomes confused in places.	6 – 10 marks
1	A weak response provides an answer that: • has identified one or more relevant issues • has some limited knowledge and understanding of economic terminology, concepts and principles but some errors are likely • has very limited application of relevant economic principles to the given context and/or data to the question • might have some limited analysis but it may lack focus and/or become confused.	1 – 5 marks

[15]

**19.****Areas for discussion include:**

- definition of imperfect information and market failure
- why imperfect information may be considered a source of market failure
- explanation of asymmetric information and how it can lead to some markets working inefficiently (or even collapsing altogether) when sellers know more about the true value of the good or service they are selling than the buyers (ie the 'Market for Lemons')
- explanation of moral hazard, where agents (knowing more about their risk profile than the insurer does) take excessive risk because they are protected from the negative consequences of their actions by insurance, thus leading to market failure
- how imperfect information can lead to the under-provision of merit goods and over-provision of demerit goods
- how imperfect information does not merely mean the absence of information. Information can also be imperfect if it is presented unhelpfully or incompletely such that making good decisions becomes very difficult
- agents may suffer from bounded rationality and cognitive biases
- agents may value short-term benefits too much due to a lack of information which could lead to poverty, eg lack of saving for pensions
- examples of markets in which imperfect information causes problems, eg the labour market, the cigarette market, the market for insurance.

The use of relevant diagrams to support the analysis should be taken into account when assessing the quality of the student's response to the question.

Level of response	Response	Max 15 marks
3	A good response provides an answer that: • is well organised and develops a selection of the key issues that are relevant to the question • shows sound knowledge and understanding of economic terminology, concepts and principles with few, if any, errors • includes good application of relevant economic principles to the given context and, where appropriate, good use of data to support the response • includes well-focused analysis with clear, logical chains of reasoning.	11 – 15 marks
2	A reasonable response provides an answer that: • focuses on issues that are relevant to the question • shows satisfactory knowledge and understanding of economic terminology, concepts and principles but some weaknesses may be present • includes reasonable application of relevant economic principles to the given context and, where appropriate, some use of data to support the response • includes some reasonable analysis but which might not be adequately developed or becomes confused in places.	6 – 10 marks
1	A weak response provides an answer that: • has identified one or more relevant issues • has some limited knowledge and understanding of economic terminology, concepts and principles but some errors are likely • has very limited application of relevant economic principles to the given context and/or data to the question • might have some limited analysis but it may lack focus and/or become confused.	1 – 5 marks
