

## Mark schemes

1.

**Areas for discussion include:**

- meaning and types of protectionism
- criteria for assessing whether protectionism is damaging, eg resource allocation, employment, growth, environmental impact, social factors
- benefits of free trade as illustrated by the principle of comparative advantage
- dynamic benefits of free trade, eg increased competition, economies of scale
- the problems that may result from free trade
- various arguments for protectionism, eg protection of sunrise and sunset industries, diversification of output, protection of employment, low wage arguments, protection against dumping, raising revenue to correct balance of payments deficits
- protectionism and trading blocs
- trade creation and trade diversion
- protectionism, living standards and inflation
- impact on different economies, eg developed versus developing economies
- protectionism as a means of dealing with domestic macroeconomic problems
- retaliation and 'beggar thy neighbour' policies
- short-run and long-run consequences
- exchange rate changes as an alternative to protectionism or as a form of protectionism, eg emerging economies fixing their exchange rates at a low level to encourage export-led growth.

The use of relevant diagrams to support the analysis should be taken into account when assessing the quality of the candidate's response to the question.

| <b>Introduction</b>                                                                  | <ul style="list-style-type: none"> <li>• The nature of EU single market</li> <li>• Origins of the EU</li> <li>• How 'beneficial' may be measured in terms of macroeconomic performance.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Developing the response to the question:</b><br><br><b>Application / Analysis</b> | <ul style="list-style-type: none"> <li>• Current EU policies regarding freedom of movement of labour/capital/trade etc.</li> <li>• How more EU members may affect growth</li> <li>• How more EU members may affect inflation</li> <li>• How more EU members may affect the balance of payments</li> <li>• How more EU members may affect unemployment</li> <li>• Trade diversion/Trade creation.</li> <li>• Comparative advantage</li> <li>• Extended overseas markets and economies of scale</li> <li>• The impact on inward and outward FDI</li> <li>• The relative size of the economies of the possible entrants.</li> <li>• The effects on other EU members</li> <li>• The implications of immigration</li> <li>• The possibility that these countries may enter the Eurozone.</li> <li>• Short-run and long-run considerations</li> <li>• The UK's current macro-economic performance in context.</li> </ul>                                                                                                                                          |
| <b>Evaluation</b>                                                                    | <ul style="list-style-type: none"> <li>• The importance of which countries join and when?</li> <li>• The relative size of say the agricultural sector of the new markets may affect the UK's proportion of CAP</li> <li>• The 'net contributor' argument in terms of EU funding.</li> <li>• Scope for FDI (both inward and outward)</li> <li>• The relative importance of EU institutions to the UK.</li> <li>• The relative effects on each macroeconomic goal being dependant on the UK's position on the trade cycle</li> <li>• The importance of stability</li> <li>• Important current political considerations</li> <li>• Immigration depending on the net migration size</li> <li>• Economic and social impact of further integration.</li> </ul> <p><i>Examiners should note that, for some of the weaker or average candidates, parts of the above represent quite sophisticated evaluation and so it is important to ensure that more basic evaluation is adequately rewarded where a genuine effort has been made to display that skill.</i></p> |

**Also give credit for**

- Reference to the UK/other economies
- Diagrams
- An overall judgement on the issues raised.

It will only be possible for candidates to consider a few of the above. They may also discuss other issues not mentioned above.

[25]

3.

**Explanation:**

**For defining/explaining**

- Comparative advantage
- The difference between absolute advantage and comparative advantage.
- International trade.

**For Example:** As countries specialise in the provision of goods and services in which they hold a natural or assumed advantage either due to factor endowment or the development of specific advantages due to cost reasons over time due to having a lower opportunity cost then it would be mutually beneficial for to exchange the goods or services they have specialised in, with another country as long as they can establish certain terms of trade which will therefore benefit both countries in terms of increased consumption possibilities which may allow households to consume an increased amount of goods and services which may improve living standards.

For the numerical example it is expected that the candidate is likely to make use of at least 2 'tables' where students initially demonstrates 2 economies where either the two economies are initially producing both goods or already specialising. The other expected table would demonstrate that trade was mutually beneficial in terms of increased availability of both goods.

Use of diagrams to help support explanations, eg production possibility frontiers or consumption possibilities.

Relevant real world examples and/or relevant reference to the UK and/or other economies.

It will only be possible for candidates to consider a few of the above. They may also discuss other issues not mentioned above.

[25]

5.

#### Explanation:

Definition: As there is no single definition for this, any suitable definitions can be credited: eg The ability of an economy to sell goods and services in or to other countries and linking to the theory comparative advantage or in terms of lower costs of production or price/non price competitiveness

#### Analysis:

**For Example:** A fall in corporation tax may reduce a firms costs therefore the firms expected profits may rise and improve confidence which may be a catalyst for investment which may increase spending on both human capital and physical capital which may lead to productivity advancements allowing firms to sell goods for cheaper on international markets.

Use of appropriate diagrams, eg AD/AS

Reference to the UK or other economies.

[9]

6.

**Explanation:**

For a relevant explanation of circular flow: eg A model which demonstrates the flow of money between households and firms and going on to explain the role of injections/leakages or linking the circular flow to measures of national income/output /expenditure.

For a diagram of the circular flow

**Analysis:**

**For Example:** Increased growth in the US could lead to rising disposable income of US citizens who may increase their spending this may be on UK's goods or services which would lead to increased export earnings for the UK which would increase the output of UK firms and therefore AD of which exports are a component which therefore increases the national income of the UK.

Use of appropriate diagrams, eg a diagram showing increased AD on an AD/AS diagram or increased FDI from overseas increasing both AD and AS

Reference to the UK or other economies.

[9]

It will only be possible for candidates to consider a few of the above. They may also discuss other issues not mentioned above.

[25]

12.

A

[1]

13.

**Areas for discussion include:**

- definitions of free trade and protectionist policy in context of international trade
- types of protectionist policy
- potential benefits gained through protectionist policies e.g in relation to growth, jobs the current account of the balance of payments
- the growing UK current account deficit; has been at record levels as a percentage of GDP
- businesses may find it hard to compete against low-cost foreign competition
- improvements in technology, transport etc. make it easier for consumers to buy from abroad
- impact of international trade on government objectives for jobs and the current account balance
- cheaper labour overseas makes it hard for UK businesses to compete on price
- cheap labour is just another form of comparative advantage and should not be seen as unfair
- arguments to justify protection, e.g. infant industry, job protection, prevention of dumping
- membership of the WTO makes it very difficult for the UK to adopt protectionist policies
- EU membership means severe limitations on what protectionist measures can be introduced
- protectionist policies are likely to lead to retaliation from other countries no real evidence that protectionist policies work in long-run – countries with highly protected industries have not outperformed those with more open economies
- discussion of alternatives to protectionism, eg allowing the exchange rate to fall international trade may make it easier to achieve some government objectives, e.g. low inflation and high productivity

The use of relevant diagrams to support the analysis should be taken into account when assessing the quality of the student's response to the question.

[25]

14.

**Relevant issues include:**

- definition of international trade
- absolute and comparative advantage
- benefits of comparative advantage as long as trade occurs at a mutually beneficial terms of trade
- numerical example to illustrate the principle of comparative advantage
- international trade allows specialisation so countries can benefit from more efficient production which should mean more jobs and cheaper prices for consumers
- availability of consumer goods that cannot be easily produced in UK
- increased choice for consumers which should lead to lower prices and higher quality products
- helps to prevent domestic firms with monopoly power exploiting consumers
- the dynamic effects of international trade on domestic producers, eg through increased competition stimulating improvements in productivity and innovation

The use of relevant diagrams to support the analysis should be taken into account when assessing the quality of the student's response to the question.

[15]

**15.**

**Relevant issues include:**

- lower AD leading to a fall in the price level
- reduction in consumer confidence and spending
- lower business confidence and investment
- price cutting by firms in a period of recession
- recession/deflation in the rest of the world
- falling world commodity prices
- strengthening exchange rate
- technological breakthroughs lowering costs of production
- impact of cheaper imports from low waged economies
- malign v benign deflation

The use of relevant diagrams to support the analysis should be taken into account when assessing the quality of the student's response to the question.

**[15]**

**16.**

**Areas for discussion include:**

- nature and size of the UK current account deficit in recent years
- why large current account deficits are seen as undesirable, e.g. indicate a lack of competitiveness
- potential benefits of running a current account deficit, e.g. improves living standards in the short run, inflows of FDI to finance the deficit may stimulate growth
- current account deficit has to be financed in some way – either by attracting foreign direct or portfolio investment, by borrowing or by running down reserves.
- policies to correct the deficit are not necessarily desirable, either depreciation of the currency or deflationary policies
- large current account deficit may be seen as unsustainable and foreign lenders may eventually withdraw their investment, leading to a sterling crisis
- if deflationary measures are needed to reduce deficit and this would usually be undesirable due to the effects on output and employment
- so far, long periods of current account deficit do not seem to have been a barrier to achieving other policy objectives
- the changing size of the deficit could be compared to growth, e.g. if the growth of nominal GDP is higher than growth in the deficit then it is less likely to be a serious problem
- UK is relatively successful in attracting overseas investment due to other factors (e.g. low tax rates, viewed as a stable economy) which means that the deficit can be financed.
- a floating exchange rate mean that the government can allow exchange rate to depreciate allowing partial correction of current account deficit – this option is not available to those with a fixed or pegged currency

The use of relevant diagrams to support the analysis should be taken into account when assessing the quality of the student's response to the question.

**Relevant issues include:**

- biggest trade deficit £36, 733 million coincides with the fastest growth rate in GDP (3.4%) in 2007
- years of recession (negative growth in GDP) occur when the deficit on balance of trade in goods and services improves in both years (2008 and 2009)
- when growth picks up in 2010 (1.7% from -5.2% in 2009) the deficit on the balance of trade in goods and service deteriorates (£32 852 million from £23 373 million)
- why an increase in the rate of growth of GDP often leads to an increased deficit in the balance of trade in goods and services

**[4]**

21.

**Relevant issues include:**

- the nature of economic growth
- short-run versus long-run growth
- UK economic growth and living standards
- UK economic growth, tax revenues, public spending and the budget balance
- UK economic growth, inequality and poverty
- UK economic growth and employment
- UK economic growth and inflation
- UK economic growth and the balance of payments, including export-led growth
- the relationship between the government's wider political and social objectives, eg political and military power, the environment.

The use of relevant diagrams to support the analysis should be taken into account when assessing the quality of the candidate's response to the question.

| 3                 | <b>A good response provides an answer that:</b> <ul style="list-style-type: none"> <li>is well organised and develops a selection of the key issues that are relevant to the question</li> <li>shows sound knowledge and understanding of economic terminology, concepts and principles with few, if any, errors</li> <li>includes good application of relevant economic principles and, where appropriate, good use of data to support the response</li> <li>includes well-focused analysis with clear, logical chains of reasoning.</li> </ul>                        | 11-15 marks  |
| 2                 | <b>A reasonable response provides an answer that:</b> <ul style="list-style-type: none"> <li>focuses on issues that are relevant to the question</li> <li>shows satisfactory knowledge and understanding of economic terminology, concepts and principles but some weaknesses may be present</li> <li>includes reasonable application of relevant economic principles and, where appropriate, some use of data to support the response</li> <li>includes some reasonable analysis but which might not be adequately developed or becomes confused in places.</li> </ul> | 6-10 marks   |
| 1                 | <b>A weak response provides an answer that:</b> <ul style="list-style-type: none"> <li>has one or more relevant issues identified</li> <li>has some limited knowledge and understanding of economic terminology, concepts and principles but some errors are likely</li> <li>has very limited application of relevant economic principles and/or data to the question</li> <li>might have some limited analysis but it may lack focus and/or become confused.</li> </ul>                                                                                                | 1-5 marks    |

**Relevant issues include:**

- impact on employment, unemployment and human capital
- impact on real GDP and aggregate demand
- multiplier and accelerator effects
- effects on long-run growth and productivity
- spill-over effects on other firms
- impact on the balance of payments: exports and import substitution
- impact on the budget balance and public sector debt
- may stimulate spending on improvements to the infrastructure

**Areas for discussion include:**

- the difference between economic development and economic growth
- the nature of free trade and preferential trading arrangements
- the role of multinational companies in global trade and economic development
- examples of how global trade policies impact on the economic development of a country, eg removal of tariff barriers into the EU provide an opportunity for greater exports
- factors that contribute to economic development, eg investment in infrastructure, investment in human capital, better health care and sanitation
- export-led growth
- exports as an injection into the circular flow of income with associated multiplier effects
- how export earnings generate foreign currency that can be used to finance imports that are necessary for development
- free trade leads to cheaper imports and can promote improvements in the competitiveness of domestic producers
- trade and comparative advantage
- trade may allow sectors within an economy to develop economies of scale and create opportunities to access new technology
- the view that exports promote self-reliance, whereas aid promotes dependency
- free trade may inhibit the development of infant industries
- free trade may lead to reliance on a limited range of products, maybe a few primary products, and lead to instability
- free trade may result in large, unsustainable current account deficits
- aid might damage domestic producers, eg food aid and agriculture
- aid may be directed at prestige projects and be misappropriated by corrupt officials
- aid can be effective in improving basic living standards and allow people to escape from poverty and disease
- effectiveness of aid depends on the type of aid and how it is distributed.

The use of relevant diagrams to support the analysis should be taken into account when assessing the quality of the candidate's response to the question.

The use of examples of developing economies should be taken into account when assessing the quality of response.
