

Mark Scheme

Q1.

Part	Working or answer an examiner might expect to see	Mark	Notes
(a)	$IQR = 2.6 - 19.4 = 7.2$	B1	This mark is given for finding the interquartile range
	$19.4 - (1.5 \times 7.2) = 8.6$ $19.4 + (1.5 \times 7.2) = 37.4$	M1	This mark is given for a method find the values for the whiskers of the boxplot
			
		A1	This mark is given for plotting the correct whisker (8.6) on the boxplot
		A1	This mark is given for plotting the two correct outliers 7.6 °C and 8.1 °C
(b)	October (since it is the month with the coldest temperatures between May and October in Beijing)	B1	This mark is given for a correct suggestion with a supporting reason.
(c)	$\sigma = \sqrt{\frac{S_{xx}}{n}} = \sqrt{\frac{4952.906}{184}} = \sqrt{26.92} = 5.19$	B1	This mark is given for showing the calculation for the standard deviation to three significant figures
(d)	$z = (\pm) 1.2816$	B1	This mark is given for identifying the z-value for the 10th and 90th percentiles (from tables or calculator)
	$2 \times z \times 5.19$	M1	This mark is given for a method to find the interpercentile range between the 10th and 90th value
	$= 13.303$	A1	This mark is given for finding a correct interpercentile range between the 10th and 90th value
(e)	Daily wind speed (Beaufort) since it is qualitative data	B1	This mark is given for stating a correct variable with a supporting reason
	Rainfall (since it is not symmetric)	B1	This mark is given for stating a correct variable with a supporting reason
(Total 11 marks)			

Q2.

Question	Scheme	Marks	AOs
(a)	Area = $8 \times 1.5 = 12 \text{ cm}^2$ Frequency = 8 so $1 \text{ cm}^2 = \frac{2}{3} \text{ hour (o.e.)}$	M1	3.1a
	Frequency of 12 corresponds to area of 18 so height = $18 \div 2.5 = 7.2 \text{ (cm)}$	A1	1.1b
	Width = $5 \times 0.5 = 2.5 \text{ (cm)}$	B1cao	1.1b
		(3)	
(b)	$[\bar{y} =] \frac{205.5}{31} = \text{awrt } 6.63$	B1cao	1.1b
	$[\sigma_y =] \sqrt{\frac{1785.25}{31} - \bar{y}^2} = \sqrt{13.644641} = \text{awrt } 3.69$	M1	1.1a
	allow $[s =] \sqrt{\frac{1785.25 - 31\bar{y}^2}{30}} = \text{awrt } 3.75$	A1	1.1b
		(3)	
(c)	Mean of Heathrow is higher than Hum and standard deviation smaller suggesting Heathrow is more reliable	M1	2.4
	Hum is South of Heathrow so does <u>not</u> support his belief	A1	2.2b
		(2)	
(d)	$\bar{x} + \sigma \approx 10.3$ so number of days is e.g. $\frac{(11 - "10.3")}{3} \times 8 (+5)$	M1	1.1b
	= 6.86 so 7 days	A1	1.1b
		(2)	
(e)	$[H = \text{no. of hours}] \quad P(H > 10.3) \text{ or } P(Z > 1) = [0.15865 \dots]$	M1	3.4
	Predict $31 \times 0.15865 \dots = \underline{4.9 \text{ or } 5 \text{ days}}$	A1	1.1b
		(2)	
(f)	(5 or) 4.9 days < (7 or) 6.9 days so model may not be suitable	B1	3.5a
		(1)	
(13 marks)			

Notes:	
(a)	
M1:	for clear attempt to relate the area to frequency. Can also award if their height $\times$ their width = 18
A1:	for height = 7.2 (cm)
(b)	
M1:	for a correct expression for σ or s , can fit their value for mean
A1:	awrt 3.69 (allow $s = 3.75$)
(c)	
M1:	for a suitable comparison of standard deviations to comment on reliability.
A1:	for stating Hurn is south of Heathrow and a correct conclusion
(d)	
M1:	for a correct expression – fit their $\bar{x} + \sigma \approx 10.3$
A1:	for 7 days but accept 6 (rounding down) following a correct expression
(e)	
M1:	for a correct probability attempted
A1:	for a correct prediction
(f)	
B1:	for a suitable comparison and a compatible conclusion

Q3.

	Scheme	Marks	AO
(a)	$[68 - 7 =] \underline{61}$ (only)	B1 (1)	1.1b
(b)	$[25 - 14] = \underline{11}$	B1 (1)	1.1b
(c)	$\left[\mu \text{ or } \bar{x} = \frac{607.5}{27} = \right] = \underline{22.5}$	B1 (1)	1.1b
(d)	$\sigma = \sqrt{\frac{17\,623.25}{27} - "22.5" ^2} \text{ or } \sqrt{146.4629...}$ $= 12.10218... \text{ awrt } \underline{12.1}$	M1 A1 (2)	1.1b 1.1b
(e)	$\mu + 3\sigma = "22.5" + 3 \times "12.1..." = \text{awrt } 59 \text{ so only } \underline{\text{one}} \text{ outlier}$	B1ft (1)	1.1b
(f)	Median increases implies that both values must be > 20 Mean is the same means that $a + b = 45$ So possible values are: e.g. $b = 21$ and $a = 24$ (o.e.)	M1 M1 A1 (3)	3.1b 1.1b 2.2b
(g)	Both values will be less than 1 standard deviation from the mean and so the standard deviation of all 29 values will be smaller	B1 (1)	2.4
		(10 marks)	

	Notes
(a)	B1 for correctly interpreting the box plot to find the range (more than 1 answer is B0)
(b)	B1 for correct understanding of IQR and answer of 11
(c)	B1 for 22.5 only (or exact equivalent such as $\frac{45}{2}$). Allow 22 mins and 30 secs.
(d)	M1 for a correct expression including square root. Allow $\sqrt{146}$ or better. Ft their mean A1 for awrt 12.1 NB Allow use of $s = 12.3327...$ or awrt 12.3
(e)	B1ft for a correct calculation or value based on their μ and σ and compatible conclusion
(f)	1 st M1 Correct start to the problem and a correct statement about the values based on median Allow if their final two values are both >20 2 nd M1 for a correct explanation leading to equation $a + b = 45$ (o.e. e.g. equidistant from mean) Allow if their final two values sum to 45 A1 for a correct pair of values (both > 20 with a sum of 45) and at least some attempt to explain how their values satisfy at least one of the conditions (both > 20 <u>or</u> $a + b = 45$). Ignore $a =$ or $b =$ labels NB The values for a and b do not need to be integers.
(g)	B1 for a correct explanation. Must mention that both values are less than 1 sd (ft their answer to (d)) from the mean

Q4.

	Scheme	Marks	AO
(a)	Hectopascal <u>or</u> hPa	B1 (1)	1.2
(b)	$\bar{x} = \bar{y} + 1010$ <u>or</u> $\frac{214}{30} + 1010$ $= 1017.1333...$ awrt <u>1017</u>	M1 A1 (2)	1.1b 1.1b
(c)	$\sigma_x = \sigma_y$ (or statement that standard deviation is not affected by this type of coding) $[\sigma_y =] \sqrt{\frac{5912}{30} - ("7.13[33...]")^2}$ <u>or</u> $\sqrt{146.1822...}$ $= 12.0905...$ awrt <u>12.1</u>	M1 A1 (3)	3.1b 1.1b 1.1b
(d)	High pressure (since approx. mean + sd) so clockwise Locations are (from North to South): Leuchars, Heathrow, Hurn Wind direction is direction wind blows <u>from</u> So: Heathrow (NE) Hurn (E) Leuchars (W)	B1 B1 (2)	2.4 2.2a
		(8 marks)	

	Notes
FYI	1 hPa = 100 Pa; 10hPa = 1 kPa; 1Pa = 1 Nm ⁻²
(a)	B1 for “hectopascal” <u>or</u> hPa (condone pascals, allow millibars <u>or</u> mb) o.e. Do NOT allow kPa <u>or</u> kilopascals <u>or</u> Pa on its own
(b)	M1 for a strategy to find $\bar{x}$ Allow an attempt to find $\sum x$ that gets as far as $\sum x = \sum y + 30 \times 1010 [= 30\,514]$ A1 for awrt 1017 (accept 1020) [Ignore incorrect units]
(c)	1 st M1 for an overall strategy using the fact $\sigma_x = \sigma_y$ (can be implied by correct <u>final</u> ans) <u>or</u> for $\sum x = 30\,514$ and $\sum x^2 = 31\,041\,192$ (both seen and correct) 2 nd M1 for a correct expression (with $\sqrt{\quad}$) (ft their $\bar{y}$ to 3sf) allow awrt 146 for 146.1822.. <u>or</u> for correct expression in x can ft their $\sum x > 30\,000$ or their answer to (b) A1 (dep on 2 nd M1) for awrt 12.1 [Ignore incorrect units] Final answer Final ans of awrt 12.1 scores 3/3 but if they then adjust for x e.g. add 1010 (M0M1A1)
(d)	1 st B1 for at least one of these reasons (these 2 lines) clearly stated (may see diagram) Need “high pressure” and “clockwise” to score on 1 st line Contradictory statements B0 e.g. correct N-S list but say “anticlockwise” 2 nd B1 (indep of 1 st B1) for deducing the 3 correct directions either in the table or stated as above If the answers in table and text are different we take the table (as question says)

Q5.

Question	Scheme	Marks	AOs
(a)	tr	B1	1.2
		(1)	
(b)(i)	$\mu = \frac{174.9}{31} = 5.6419\dots$ awrt 5.64	B1	1.1b
(ii)	$\sigma_r = \sqrt{\frac{3523.283}{31} - \mu^2}$	M1	1.1b
	$= 9.04559\dots$ awrt 9.05	A1	1.1b
		(3)	
(c)	Leuchars is in the North and Camborne is in the South	M1	2.4
	The mean is smaller for Leuchars than Camborne therefore there is no evidence that Dian's belief is true	A1ft	2.2b
		(2)	
(d)	eg $p = 0.27$ is unlikely to be constant.	B1	2.4
		(1)	
(7 marks)			

Notes:		
(a)	B1	Allow Tr or trace or Trace
(b)	B1	For a correct mean awrt 5.64
(i)		
(ii)	M1	For a correct expression for sd including the $\sqrt{\quad}$ Ft their mean
	A1	awrt 9.05 (Allow $s = 9.1932\dots$ awrt 9.19) NB awrt to 9.05 or 9.19 with no working is M1 A1
(c)	M1	For stating Leuchars is North of Camborne oe eg Camborne is further south
	A1ft	M1 must be awarded. A correct conclusion and correct comment about the means ft their mean in (b) Allow No
	SC	for No and there are only 2 places used so there is insufficient data. Mark as M0A1 on open
(d)	B1	A correct reason referring to - independence (needs context as to what is independent) eg consecutive 14 days unlikely to be independent. - probability [of rain] not being constant. - Allow a comment that conveys the idea that the proportion of days with no rain will be different over the year.

Q6.

Qu	Scheme	Marks	AO
(a)	Convenience <u>or</u> opportunity [sampling]	B1	1.2
		(1)	
(b)	Quota [sampling]	B1	1.1a
	e.g. Take 4 people every 10 minutes	B1	1.1b
		(2)	
(c)	Census	B1	1.2
		(1)	
(d)	[58 – 26 =] <u>32</u> (min)	B1	1.1b
		(1)	
(e)	$\mu = \frac{4133}{95} = 43.505263\dots$ $\sigma_x = \sqrt{\frac{202\,294}{95} - \mu^2} = \sqrt{236.7026\dots}$ $= 15.385\dots$ awrt <u>15.4</u> (min)	B1 awrt <u>43.5</u> (min)	1.1b
		M1	1.1b
		A1	1.1b
		(3)	
(f)	There are outliers in the data (or data is skew) which will affect mean and sd Therefore use median and IQR	B1	2.4
		dB1	2.4
		(2)	
(g)	Value of 20, LQ at 26 and outliers will not change <u>or</u> state that median and upper quartile are the values that <u>do</u> change <u>More values now below 40 than above</u> so Q_2 <u>or</u> Q_3 will change and be lower Both Q_2 <u>and</u> Q_3 will be lower	B1	1.1b
		M1	2.1
		A1	2.4
		(3)	
		(13 marks)	

	Notes
(b)	1st B1 for quota (sampling) mentioned ("Stratified" or "systematic" or "random" are B0B0) 2nd B1 for a description of how such a system might work, requires suitable strata or categories e.g. time slots, departments, gender, age groups, distance travelled etc Suggestion of randomness is B0
(e)	B1 for a correct mean (awrt 43.5) M1 for a correct expression for the sd (including $\sqrt{\quad}$) ft their mean A1 for awrt 15.4 (Allow $s = 15.4667 \dots$ awrt 15.5)
(f)	1st B1 for acknowledging <u>outliers</u> or <u>skewness</u> are a problem for <u>mean and sd</u> "extreme values"/"anomalies" OK May be implied by saying median and IQR not affected by.. We need to see mention of "outliers", "skewness" and the problem so "data is skewed so use median and IQR" is B0 unless mention that they are not affected by extreme values <u>or</u> mean and standard deviation can be "inflated" by the positive skew etc 2nd dB1 dep on 1st B1 for therefore choosing <u>median and IQR</u>
(g)	B1 for identifying 2 of these 3 groups of unchanged values or stating only Q_2 and Q_3 change M1 for <u>explaining</u> that median or UQ should be lower. E.g. the 2 values have moved to below 40 (or 58) and therefore more than 50% below 40 or (more than 75% below 58) <u>or</u> an argument to show that the other 3 values are the same. (o.e.) Allow arrows on box plot provided statement in words about increased % below 40 or 58 etc A1 for stating median <u>and</u> UQ are both lower with clear evidence of M1 scored [If lots of values on 40 then median might not change but, since two values <u>do</u> change then UQ would change. If this meant that 92 became an outlier then we would have a new value for upper whisker and an extra outlier so effectively 3 values are altered. So median changes]
